Recently, the Pebble Partnership submitted its federal permit application to develop a massive open pit mine at the headwaters of Bristol Bay, Alaska - home to world-class salmon rivers. A review of their plans confirms that:

- The Pebble Mine would irrevocably damage Bristol Bay’s salmon runs, clean water, and wild landscape.
- The current application is for phase one only and will require wastewater treatment into perpetuity. No mine of this size and type has operated without impacts to ground and surface water in North America.

### THE MINE PROPOSAL

- **An open pit mine up to 1,750 feet deep and over a mile wide & long** in the headwaters of the largest sockeye salmon run in the world.
- **Approximate area of the mine and associated infrastructure**: 15 mi² footprint
- **6.4 mi² of wetlands will be dug up or filled in**
- **Private road system nearly 100 miles long** to haul minerals and mine waste would cross Lake Iliamna and salmon streams (200+ times), including famed Upper Talarik Creek & the Gibraltar River.

### Pebble Deposit

- **Pebble Deposit = 10.8 billion tons of ore**
- **Current Plan = 1.2 billion tons of ore**

The company has not relinquished mining claims on hundreds of square miles of state land adjacent to the proposed mine site. The Pebble Mine will very likely expand significantly over time and provide infrastructure and power generation toward the development of nearby mines.

### RISKS TO SALMON, COMMUNITIES AND JOBS CONFIRMED IN RECENTLY RELEASED MINE PLAN

- **The company has not relinquished mining claims on hundreds of square miles of state land adjacent to the proposed mine site. The Pebble Mine will very likely expand significantly over time and provide infrastructure and power generation toward the development of nearby mines.**

### MORE INFORMATION:

- **More than 99% of all comments — 2.5 million+ in total — were submitted to the EPA in opposition to the mine.**
